SUMMARY

Innovative and self-driven Software Engineer passionate about designing intelligent systems and efficient backend solutions. Skilled in full-stack development, AI integration, and data-driven software design. Experienced in operational management and process automation, with a proven record of leveraging technology to optimize real-world systems. Enthusiastic about applying AI to industrial and low-resource environments.

EDUCATION

Sep 2019 - Dec 2024

B.Sc. Computer Science

Yobe State University

- Final-Year Project: AI Chat Assistant for the university (Python, NLP, Flask).
- Key Courses: ArtificialIntelligence, problem-solving, Software Engineering, Data Structures.

WORK & INTERNSHIP EXPERIENCE

Operations Manager & Software Developer – Bread Nylon Distribution Shop, Damaturu

January 2022 - Present

- Managed daily operations including inventory, sales, and supply chain logistics.
- Developed and deployed a digital system for sales, inventory, expense, and profit tracking.
- Automated reporting and optimized operational workflows, improving efficiency and reducing errors.

IT Support & Auditor General – Shariff Charity Foundation, Gujba, Nigeria

February 2024 - Present

- Maintained digital records for program operations and beneficiaries.
- Provided technical support for data management and reporting processes.
- Assisted in process automation to improve organizational workflow.

Software Engineering Intern (SIWES) Federal Polytechnic Damaturu – Computer Science Department, ICT Unit

July 2023 - December 2023

- Developed and maintained web applications for staff and student record management.
- Designed database schemas and implemented CRUD operations using Flask and PostgreSQL.
- Debugged and optimized legacy systems for performance and scalability.
- Collaborated with senior engineers on module deployment and testing (DevOps exposure).

RESEARCH & PROJECTS

- A Knowledge-Based AI Chat Assistant for Yobe State University Students – Final year project, later published in Journal of ICT Development, Applications and Research (JICTDAR). [DOI Link](#)
- Kanuri Machine Translation (KMT) Project – Accepted proposal leveraging Neural Machine Translation for low-resource language accessibility.
- OCR for Kanuri Characters – Ongoing project training custom OCR models to recognize unique Kanuri diacritics.
- Mobile & Web Apps – Developed apps for order booking, delivery tracking, account validation, and inventory management using React, React Native, Go, and PostgreSQL.
